

## ABSTRACT

It is an object of the present invention to provide  
5 an allergen suppressor exerting an effect of suppressing an  
allergen under humidities normally used, and an allergen-  
suppression processed fiber, which can suppress an allergen  
adhering to fibers automatically without applying an  
allergen-suppression process and a method of producing the  
10 same.

That is, the present invention is an allergen  
suppressor, which contains a hydrophilic polymer and a  
component suppressing an allergen.
